10 kwh solar system American Samoa

Overview

How much solar power does American Samoa have?

In 2021, solar power accounted for about 11% of American Samoa's electricity generating capacity. American Samoa is less than 1,000 miles south of the equator and has abundant solar energy resources.

How much energy does a 10kW Solar System use?

Yes, a 10kW solar panel system will cover the average American household's energy usage of about 10,715 kWh of electricity per year. However, your home's energy needs could be quite different than the average American household. In fact, energy consumption varies a lot between states.

What kind of energy does American Samoa use?

American Samoa uses imported fossil fuels for almost all of the territory's energy needs, including transportation, drinking and waste water treatment, and most (about 97% in 2020) of its electric power generation. Electricity prices in American Samoa vary with world petroleum prices.

How much does electricity cost in American Samoa?

Electricity prices in American Samoa vary with world petroleum prices. In 2021, the territory's average electricity price was more than 31 cents per kilowatthour, about 3 times higher than the U.S. average.

How much roof space does a 10kW Solar System need?

You will need between 440 and 475 square feet of roof space to accommodate a 10kW solar system. Depending on where you live, a 10kW solar system will produce anywhere from 11,000 to 15,000 kWh per year, which is enough to cover the average American home's annual energy consumption.

Will a 10kW Solar System work in Louisiana?

So while a 10kW solar array might be perfect for a home in Louisiana, it might be too big for a home in a state like New York, which uses much less electricity on average. 10kW solar systems do produce enough electricity that you could go off-grid.
