What is a wind generator?

A wind generator is just another name for a wind turbine. A wind turbine is a device that converts the wind's kinetic energy into electrical energy. Wind turbines comprise blades that spin when wind passes through them. The rotating turbines, in turn, spin a shaft/coil built into the turbine's motor.

How many kW does a home wind turbine generate?

A typical single-family home will require a home wind turbine to generate 5 kW to meet household energy needs. To achieve this, you're looking at installing a turbine with around a 13-18 foot rotor diameter, and it will need to be placed somewhere with strong winds for most of the year.

What can a wind turbine power?

The turbine comes with a 3-phase synchronous generator that can charge a 12 V battery and with an inverter you could use it to power a laptop, phone, tools, or lights. In optimal conditions, you may be able to generate enough energy to power a small home or several home appliances.
