What is solar panel racking?

Solar panel racking is a vital component of your PV set up. These systems provide your panels with the necessary angles and stability they require to get the job done.

What is solar racking made of?

Solar racking is usually made from aluminum. Aluminum works well for rooftop installations due to its combination of strength and low weight, as compared to other metals. The cost of solar racking represents only a small portion of a total installation.

What are solar panel mounts and racks?

Solar panel mounts and racks are specialized equipment systems used to secure and stabilize solar panel arrays. They can be used to mount solar panels on a building roof, on poles in the ground, or even on a tracking device. Fixed and stationary mounting hardware is the most commonly used method for mounting solar panels.
