Can photovoltaic panels be recycled using organic solvent delamination?

Photovoltaic (PV) panel manufacturing is increasing worldwide, which subsequently increases the amount of waste PV. This study proposes to recycle waste PV using organic solvent delamination followed by downstream thermal and leaching procedures.

Can photovoltaic panels be recycled?

Recycling photovoltaic (PV) panels is essential for the sustainable growth of the PV sector on a global scale. This review explores different techniques employed by researchers for recycling and recovering metals from PV panels.

How is photovoltaic waste treated in India?

India recycling regulations: As of now, India lacks specific rules and regulations dedicated to the management of photovoltaic (PV) panel waste, and it is currently treated under general waste regulations (Preet et al., 2023).

Can PV module waste be recycled?

However, efforts have been made to encourage proper disposal and recycling of PV module waste through amendments to the law on renewable energy under the “Act on the Promotion of the Development, Use, and Diffusion of New and Renewable Energy” (Kim et al., 2014).

What happens if PV panels are improperly disposed?

Improper disposal can result in soil and water contamination (Bang et al., 2018), harming the biosphere (Zhang et al., 2023), while the polymers in PV panels release toxic gases (Rathore and Panwar, 2022).

Can a high-voltage pulse method enrich PV panel waste?

After separation, there was a 30% increment in silver concentration. Moreover, the processing cost of this method is found to be around 0.0019 \$/W, making it an economical solution for recycling PV panels. Zhao et al. (2020) performed a parametric investigation on a high-voltage pulse method to enrich PV panel waste.
