Do I need to adjust the liquid-cooled generator set?

The liquid-cooled generator set was factory tested and adjusted using natural gas or liquid propane (LP) gas according to specifications. You should not be required to adjust the unit any further except under special circumstances. **WARNING: DO NOT MAKE ANY UNNECESSARY ADJUSTMENTS. FACTORY SETTINGS ARE CORRECT FOR MOST APPLICATIONS.**

What happens if you run a 60 Hz air-cooled generator?

(000103) Asphyxiation. Running engines produce carbon monoxide, a colorless, odorless, poisonous gas. Carbon monoxide, if not avoided, will result in death or serious injury. **DANGER** Safety Information 3 Owner's Manual for 60 Hz Air-Cooled Generators.

How do you readjust a load block for a natural gas generator?

However, because of variations in the Btu content of natural gas across the country, it may be necessary to readjust the load block. • Connect a frequency meter to the output of the generator. • Start the unit and apply full load (33 amps at 240 volts – 66 amps at 120 volts AC).

How do you clean a generator air cleaner?

With the generator shut down, lift the lid and remove the front panel. 22 kW), or disengage the wire clip and open the air cleaner access door (8 kW). Pull out the old air filter and discard. Thoroughly clean the air cleaner enclosure of

any dust or debris. Install a new air cleaner.
