Are agm batteries suitable for solar energy storage

Overview

What is an AGM solar battery?

An AGM solar battery, short for Absorbed Glass Mat, has many benefits over standard 'flooded' batteries. Since AGM batteries are a type of lead-acid battery wherein the caustic components inside are completely sealed, users can place them in awkward positions, like on their side, without fear of spilling the acid inside.

Are AGM batteries a good choice for solar panels?

While both battery types fare reasonably on roundtrip efficiency for solar systems, AGMs hold a small edge. This matters more in smaller off-grid systems where extracting maximal energy from your solar panels is key. Cycle life is the number of discharge-recharge cycles the battery withstands before capacity falls by 80%.

Are AGM batteries good for off-grid solar systems?

AGM batteries are handy for small, off-grid solar systems. For example, a remote cabin with low energy demand and a small system on the roof may be the perfect candidate for an AGM battery bank. No maintenance is needed, and the relatively low upfront cost of lead-acid batteries makes AGM batteries ideal for these smaller, off-grid setups.

Are deep-cycle AGM batteries a good choice for solar panels?

In recent years, deep-cycle AGM batteries have become available on the market. Like other deep-cycle lead-acid battery options, deep-cycle AGM products can be a solid choice to pair with a solar panel system in select cases.

Can AGM batteries be recycled?

Both AGM and lithium-ion batteries can be recycled, but AGM batteries often have less impact on the environment during the manufacturing process. So, if

you're conscious of your ecological footprint, AGM batteries might tick that box for you! Time to find the perfect AGM battery for your solar setup!.

Are AGM batteries safe?

AGM batteries are completely sealed, and you'll never have to check water levels or deal with expelled gas like you would in a traditional flooded lead-acid battery product. This makes AGM batteries generally a safer lead-acid option, as you can set them and never touch them again (until you need a replacement).
