# Are battery storage boxes dangerous goods

## Overview

---

Batteries and devices that contain batteries are classified as dangerous goods and have to comply with specific packaging and shipping regulations.

Batteries and devices that contain batteries are classified as dangerous goods and have to comply with specific packaging and shipping regulations.

For the purposes of this guidance document and the IATA Dangerous Goods Regulations, power banks are to be classified as batteries and must be assigned to UN 3480, lithium ion batteries, or UN 3090, lithium metal batteries, as applicable.

Below we cover general guidelines applicable to all transport modes, but check the following dangerous goods regulations for specific info: Air: IATA Dangerous Goods Regulation and the IATA Lithium Battery Shipping Regulations (LBSR) Ocean: The International Maritime Dangerous Goods (IMDG) Code.

The U.S. hazardous materials regulations and international dangerous goods regulations have very strict requirements that apply to passengers who carry batteries and portable electronic equipment on board aircraft.

Though widely used, most people are not aware that lithium batteries are dangerous goods that can pose a safety risk if not prepared in accordance with the transport regulations. To help with compliance, IATA has developed guidance for shippers, freight forwarders, ground handlers, airlines and passengers. Are lithium batteries dangerous goods?

Due to such risks, lithium batteries are classified as Class 9 dangerous goods, while other types of batteries can fall into other classes of dangerous goods. This means they are subject to regulations on packaging, labelling, quantity limits, training, and reporting. Which transport modes can be used to ship batteries?

What are the risks associated with shipping batteries?

Unique risks associated with shipping batteries: Batteries provide the power source for personal computers, phones, automobiles, and life-saving appliances. However, batteries are classified as dangerous goods, because by definition they produce electricity from a chemical reaction.

Are batteries dangerous?

However, batteries are classified as dangerous goods, because by definition they produce electricity from a chemical reaction. When improperly handled, packaged, or stored, batteries pose a risk for corrosive chemical and electrical fires. Emphasis must be placed on safety when packaging and transporting them.

Are batteries a dangerous cargo?

Nonetheless, as dangerous goods, they must be declared and shipped as such under the applicable UN number. Additionally, the vessel will have a Document of Compliance (DOC) for dangerous cargo, which indicates where the batteries can be safely stowed on board. Furthermore, all batteries must be tested and must meet the specified criteria.

Should you ship batteries safely?

From electric vehicles to laptops to massive grid storage systems, the demand for batteries is growing. And so is the need to ship batteries safely and efficiently. But hold up! You can't just toss lithium batteries in a box and call it a day. Transporting batteries is a serious business.

Are dry cell batteries a hazardous material?

above must be shipped as a Class 8 Corrosive hazardous material.VI. Dry Cell Batteries and Nickel Metal Hydride Batteries“Dry cell” batteries, such as alkaline, nickel admium, and carbon zinc are not listed as hazardous materials or dangerous goods in the U.S. and international regulations. However, the batteries must be packed in a m
