

## European Solar and Energy Storage Solutions

# Black photovoltaic support construction bidding

## Overview

---

Are solar photovoltaic systems a good investment?

For sites with time-of-use (TOU) and/or demand rates, solar PV systems are to be designed to offset the greatest amount of electricity in higher cost-rate periods and achieve the greatest annual dollar savings. Feasibility evaluations to determine the potential size of solar photovoltaic systems have not been completed.

Why should you use a solar procurement template?

Save time in compiling the specifications section of a solar procurement. The template language can be used as a starting point from which agency managers can customize their own language. Act as a checklist so that agencies managers address key issues throughout the process, to ensure the project's best possible outcome.

Do Solar Contractors need a Miller Act Payment Bond?

Since liens cannot be placed on federal projects, solar contractors and/or their suppliers and materialmen must look to a Miller Act payment bond for relief. The Miller Act has strict notice requirements with which federal contractors must comply. Failure to provide bonds can lead to termination for default by the federal government.

Can a solar contractor work with a government contractor?

Solar contractors can also pursue federal government work through subcontracting opportunities. Most government construction contracts, including subcontracts, reflect policies contained in statutes and in the Federal Acquisition Regulation (FAR).

Are EPC Partners catching up on solar-project-delivery capabilities?

Although some developers have established EPC partners, others—such as utilities that are just beginning to self-develop renewables—have arrived late

to the matchmaking and need to catch up on solar-project-delivery capabilities.

How can PV module potential-induced degradation (PID) be prevented or reversible?

PV Module Potential-Induced Degradation (PID) must be prevented or reversible through proper choice of inverter that are designed with PID prevention features. This section covers safety and reliability issues that are not yet considered to be covered adequately by current codes and standards.
