Key takeaways on series vs. parallel connections of solar panels. Solar array DIYers need to figure out the best way to wire their solar panels together to maximize their solar power output. The two major ways to accomplish this are series or parallel connections.

How do solar panels wired in series compare to solar panels wired in parallel?

A charge controller is a determining factor when it comes to solar panel wiring. Maximum Power Point Tracking (MPPT) charge controllers are for wiring solar panels in a series, where Pulse Width Modulation (PWM) charge controllers are used to wire solar panels in .

To do so, let's see how to wire two or more solar panels and batteries in parallel with solar charge controller and automatic Inverter/UPS for 120-230V AC load, battery charging and direct load i.e. DC operated appliance. Most solar panels and batteries come in 2/24/36V etc.

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.
