# Brazil off-grid solar power generation system

## Overview

Is solar power a threat to Brazil's electrical grid?

Scientific Reports 14, Article number: 23586 (2024) Cite this article The share of solar power in Brazil's electrical grid has rapidly increased, relieving GHG emissions and diversifying energy sources for greater energy security. Besides that, solar resource is susceptible to climate change, adding uncertainty to electrical grid resilience.

What is the power grid in Brazil?

The power grid connects all power generators and loads. In Brazil, the electricity grid is known as the National Interconnected Network (Portuguese: Sistema Interligado Nacional, SIN) and is managed by the National Electricity System Operator (Portuguese: Operador Nacional do Sistema Elétrico, ONS).

How can solar power improve the lives of people in Brazil?

The Amazon region produces more than a quarter of the energy in Brazil. Still, hundreds of thousands of families are off the grid and rely on expensive diesel generators to produce electricity. Solar panels and other renewable energies can greatly improve the lives of people in these regions and help create jobs.

Can biomass be used to generate electricity in Brazil?

Biomass can be burnt directly for heating or power generation, or converted into oil or natural gas substitutes. In the last 15 years, the generation of electricity from biomass thermal plants in Brazil has been increasing, from 6 GW to 14 GW, accounting for 13% of the capacity matrix of electricity for 2020.

How big is Brazil's electricity sector?

Investments in the Brazilian electricity sector is expected to reach over \$100 billion by 2029, including utility-scale generation, distributed generation, transmission, and distribution projects. Brazil's electricity matrix is one of the

cleanest in the world and Brazil is committed to continuing its support for renewable energy projects.

What percentage of Brazil's electricity comes from wind power?

Of these, 85 percent are in the country's Northeast region. By 2028, Brazil is expected to have over 44 GW of installed wind power capacity, accounting for 13.2 percent of the Brazilian electricity matrix. In 2023, solar power, when including distributed generation, became the second largest source of electricity in Brazil, surpassing wind power.
