Are ground mounting steel frames suitable for PV solar power plant projects?

In the photovoltaic (PV) solar power plant projects, PV solar panel (SP) support structure is one of the main elements and limited numerical studies exist on PVSP ground mounting steel frames to be a research gap that has not be addressed adequately in the literature.

What is a fixed adjustable photovoltaic support structure?

In order to respond to the national goal of “carbon neutralization” and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed adjustable photovoltaic support structure design is designed.

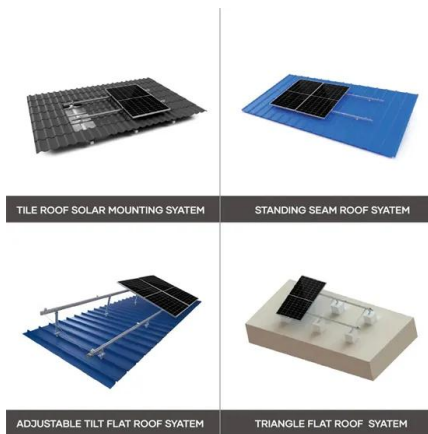

Which metric steel bolts are used in the connection between beam and brace?

The for the design calculations. The nominal diameter of metric steel bolts is (M18) made (1993), and were used in the connection between beam and column. Furthermore, M16-8.8 flange purlin bolts were used in the connection of purlins. M18 -8.8 bolts were selected for the connections between column and brace.
