CHNT photovoltaic inverter parameters

Overview

What is a PV string inverter?

To avoid any other unforeseeable risk, contact your dealer immediately, if there is any issue found during operation. 2.1.1 Function This series is a single-phase grid-tied PV string inverter (transformer less) that converts the DC power generated by PV strings into AC power and feeds the power into power grid. The inverter is transformerless.

Is Chint grid PV-inverter reliable?

CHINT Grid PV-Inverter is a highly reliable product due to its innovative design and perfect quality control. Such an inverter is used in high demand, grid-linked PV systems. If you encounter any problems during installation or operation of this unit, first check this manual before contacting your local dealer or representative.

What is a photovoltaic (PV) inverter user manual?

This user manual is intended for photovoltaic (PV) inverter operating personnel and qualified electrical technicians. This user manual is subject to change (specific please in kind prevail) without prior notice. Indicates an imminently hazardous situation which, if not correctly followed, will result in serious injury or death.

Are PV inverters reliable?

This PV Inverter is a highly reliable product due to its innovative design and high quality control. Such an Inverter is used in high demand, grid-tied PV systems. If you encounter any problems during installation or operation of this unit, first check the user manual before contacting your local dealer or supplier.

How a PV inverter can be connected with a short circuit?

Ensure that the positive and negative terminals of each PV strings connected

to the inverter correctly. The positive or negative terminals of PV strings can't be connected with short circuit. The total output power of all PV strings can't exceed the maximum input power of the inverter.

Can a PV inverter be ungrounded?

Uneven distribution of strings among the two MPPTs (e.g. PVIn1:PVIn2 = 3:1) is not recommended and may result in unnecessary power clipping. The inverters operate with ungrounded arrays, although the PV system requires a DC EGC (equipment grounding conductor) to ensure operational safety.
