Cabo Verde solar gaps

Overview

Does Cabo Verde use biomass?

Traditionally, the population of Cabo Verde use biomass as a primary renewable energy resource, which still covers a significant proportion of household energy needs (for cooking), especially in rural areas (55 percent).

What is the energy sector in Cape Verde?

Cape Verde energy sector is strongly characterized by consumption of fossil fuels (derived oil-primary imported oil), biomass (wood) and use of renewable energy particularly wind and solar power.

How much money does the SOE sector make in Cabo Verde?

In 2018, the SOE sector in Cabo Verde reached a positive overall net result of 235,786 million Escudos (about US\$2.4 million), constituting an increase of 183 percent over 2017. In 2019, the public financing¹ to SOEs represented 7 percent of GDP, down from 9.57 and 10.90 percent of GDP in 2018 and 2017 respectively.

Does Cape Verde have a wave energy potential?

In the case of Cape Verde, there is one study evaluating the wave energy potential which highlights the resource available, particularly for the northern islands, such as São Vicente . Unfortunately, the study identifies the wave resource to match that of the wind.

Is Cape Verde a developing state?

The archipelago of Cape Verde is a developing state in West Africa with extreme external energy dependency on refined oil imports despite their available solar and wind resources. Aligned with the global energy transition, the local government established goals in 2011 aiming at 50 and 100% RES.

Why is Cabo Verde growing so fast?

Following the global financial crisis of 2008, annual growth accelerated in Cabo Verde, particularly between 2016 and 2019, reaching 4.7 percent on average during that period, on the back of a thriving tourism sector and strong structural reforms. These included SOEs reform, fiscal restraint, and debt reduction.

Cabo Verde pg1

'In Cabo Verde, the World Bank has shown keen interest in sustaining high levels of growth and reducing unemployment, poverty and inequality.¹⁴ 'The total installed capacity of solar PV witnessed a CAGR of 5.01% between 2017-2021 reaching 7.58 MW in 2021 from

Towards 100% renewable islands in 2040 via generation expansion

The archipelago of Cape Verde is a developing state in West Africa with extreme external energy dependency on refined oil imports despite their available solar and wind resources. Aligned with the global energy transition, the

local government established goals in 2011 aiming at 50 and 100% RES.

ENERGY PROFILE Cabo Verde

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

COUNTRY PROFILE Cabo Verde

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

Cape Verde Renewable Energy Atlas

The Renewable Energy Atlas includes the strategic identification of resource potential, location and analysis of the solar, wind, pumped-storage, geothermal and wave resources, and resulted in the identification of 2.600 MW of Renewable Energy potential in Cape Verde, from which Gesto studied more than 650 MW in
