No, 20 solar panels are not really “a lot,” and the amount may be suitable for your home. With enough available installation space, most residential solar power systems consist of 15 to 25 panels, depending on energy demand, home size, and other factors.

If you're considering installing a residential or commercial solar panel system, you might wonder if your roof type is appropriate for a solar installation. The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material.

As of January 2022, the average cost of solar in the U.S. is \$2.776 per watt (\$13,850 for a 5-kilowatt system). That means the total 5 kW solar system cost would be \$10,249 after the federal solar tax credit (not factoring in any additional state rebates or incentives).

Installing solar panels can lower your electricity costs, reduce your tax bill, and offer healthy future returns. But there's a lot to consider before you plug into the sun. Can solar panels be installed on a commercial roof?
