What happens if a solar panel is broken?

Common causes of solar panel damage are falling objects, thermal stress, and micro-cracks and scratches. A broken solar panel may continue to work, albeit at a reduced efficiency. Broken solar panels pose a serious fire and safety risk and must be removed and replaced. Some companies can fix broken solar panels, but this is costly.

Can a broken solar panel be recycled?

A broken solar panel that cannot be repaired will have to be taken away for recycling. Whatever you do, do not throw it in a landfill or dump it anywhere. Solar panels contain harmful or toxic elements that can cause environmental damage if they leach into the ground.

Do cracked solar panels work?

Cracked panels work if we define a working panel as one that produces a current. At least most of the time, cracks don't damage the solar cells themselves. These cells are among a solar panel array's most critical components. Even if a solar cell has been damaged, that doesn't compromise the entire panel.

Can a professional replace a damaged solar panel?

Individual solar cells can be replaced by a professional, lengthening the life of

your panel overall. This is helpful if microcracking affects a few of your solar cells. Our customers don't have to worry about the cost or hassle of repairing or replacing a damaged solar panel at all.

Why do solar panels not look damaged by impact?

If energy production is down but solar panels don't look damaged by impact, the problem is most likely within the solar cells themselves. Solar panels are made up of tiny cells that are, in turn, composed of tiny "wafers" made of silicon. Each wafer is under 200 microns thick.
