The process of disassembling and relocating steel lockers typically involves removing the locker doors, shelves, and other components, followed by dismantling the main frame and .

The first step was to remove the old hardware. These solutions are applicable to many projects. 1. Bad welds that have to be removed. For this we used a dremel- I don't have pictures of the welds before removal but there was significant slag mixed in with the weld and it was very uneven.

Whether adjusting compartment arrangements or incorporating specialized storage spaces, the customization possibilities are extensive, ensuring that lockers can effectively cater to the practical demands of users.
