If you opened a new PSE electric account at a home or business with solar, you automatically benefit from net metering on your electric bills. In order to qualify for a State Production Incentive Payment, a customer must first obtain certification of eligibility from WSU Energy Program.

PV system applications. When the sun is shining, PV systems can generate electricity to directly power devices such as water pumps or supply electric power grids. PV systems can also charge a battery to provide electricity when the sun is not shining for individual devices, single homes, or electric power grids.

The United States Large-Scale Solar Photovoltaic Database (USPVDB) provides the locations and array boundaries of U.S. ground-mounted photovoltaic (PV) facilities with capacity of 1 megawatt or more. It includes corresponding PV facility information, including panel type, site type, and initial year of operation.

Yes, National Grid recommends customers maximize their home's energy efficiency before installing solar. Whether the energy you use comes from the grid or from a new solar PV system; saving energy costs less than paying for energy. If you're an RI customer, you may be eligible for a bonus solar incentive. Are solar photovoltaic map services free?

Map services and data downloaded from the U.S. Large-Scale Solar Photovoltaic Database are free and in the public domain.

What is the US large-scale solar photovoltaic database?

The U.S. Large-Scale Solar Photovoltaic Database provides the locations and array boundaries of U.S. ground-mounted photovoltaic facilities, with capacity of 1 megawatt or more.

What is a photovoltaic (PV) cell?

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy.

Should I install rooftop solar panels?

Installing rooftop solar panels allows you to generate renewable energy that can be used to power your home and reduce your ongoing electricity bills. Before making a long-term investment in solar, we strongly recommend getting multiple bids and selecting an experienced installer.

How do solar photovoltaic cells work?

Solar photovoltaic cells are grouped in panels, and panels can be grouped into arrays of different sizes to power water pumps, power individual homes, or provide utility-scale electricity generation. Source: National Renewable Energy Laboratory (copyrighted).

What is the difference between Central and distributed photovoltaics (PV)?

Photovoltaics (PV) may be centrally located in large plants or distributed on rooftops. Distributed PV has benefits, such as low land use and no transmission needs. Both distributed and central PV are usually “must-take” generators. Storing large amounts of electricity is difficult, while storing battery versus an insulated bottle).
