# Canada thermoelectric energy storage

## Overview

---

How much energy storage does Canada need?

Canada's current installed capacity of energy storage is approximately 1 GW. Per Energy Storage Canada's 2022 report, *Energy Storage: A Key Net Zero Pathway in Canada*, Canada is going to need at least 8 – 12 GW to ensure the country reaches its 2035 goals.

What is a thermal energy storage system?

Thermal energy storage mediums could include molten salt, molten aluminum, molten silicon etc. When discharging, the temperature differential between the cold and hot stores is used to convert thermal energy back into electricity. Pumped thermal energy storage systems consist of a hot and cold store, compressors, turbines and generators.

Where is energy storage installed in Canada?

At the time of this being written, there is currently energy storage installed in four provinces in Canada: Ontario, Alberta, Saskatchewan & PEI. There are several additional projects slotted for development in these provinces in the coming years, as well as in New Brunswick & Nova Scotia. Can energy storage technology work with all fuel sources?

.

How important is energy storage to Canada's transition?

Energy storage – BESS and beyond – is going to be critical to Canada's transition, so we know we need to get these projects right. Together we will. You can find a copy of the full report [HERE](#) on ESC's website. Canada's current installed capacity of energy storage is approximately 1 GW.

Is energy storage a key path to net-zero in Canada?

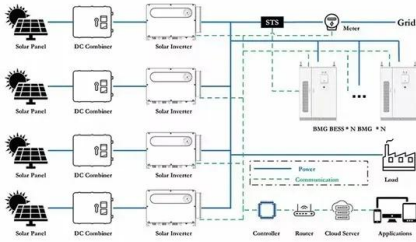

A 2022 report titled *Energy Storage: A Key Pathway to Net Zero in Canada*,

commissioned by Energy Storage Canada, identified the need for a minimum of 8 to 12GW of installed storage capacity for Canada to reach its 2035 goal of a net-zero emitting electricity grid.

What is a pumped thermal energy storage system?

Pumped thermal energy storage systems consist of a hot and cold store, compressors, turbines and generators. Electricity is used to clean, compress and cool to liquefy air/nitrogen and stores energy in the form of liquid air in a tank. When discharging, the liquid air is pumped, evaporated and the expansion of air is used to drive a turbine.

## Canada thermoelectric energy storage

### Residential thermal energy storage for renewable energy

Our team is developing data, information, and design and analysis tools to assess the potential for large-scale integration of residential thermal energy storage (RTES) to the electric grid, in various electricity jurisdictions in Canada.

### Let's Talk About BESS (Battery Energy Storage Systems)

By Leone King, Communications Manager, Energy Storage Canada. Canada's current installed capacity of energy storage is approximately 1 GW. Per Energy Storage Canada's 2022 report, Energy Storage: A Key Net Zero Pathway in Canada, Canada is going to need at least 8 - 12 GW to ensure the country reaches its 2035 goals. While the gap to close between ...
