Cement blocks for photovoltaic brackets

Overview

Can a reinforced concrete block support a solar panel above ground?

In areas where penetration of the ground is difficult or restricted for archaeological or safety reasons, our reinforced concrete blocks are the perfect solution, providing ballast to support these solar panels above ground. Our solar panel ballast blocks are designed to provide support to multiple panels.

Can a concrete base support solar panels?

An example of free-standing concrete bases being used to support solar panels can be seen at Wellingborough solar farm. Due to an archaeological restriction on part of the land, our bespoke division manufactured 275 reinforced concrete blocks, this allowed a group of panels to be erected without the need for excavation.

What types of solar ballast footings does Conigliaro block manufacture?

Conigliaro Block manufactures all types of precast concrete solar ballast footings used to securely mount and position solar panels. Our solar ballast blocks are poured to your specifications to prevent movement and overturning of solar panel systems. Our footings are available in a wide range of sizes, weights and mixes.

Are concrete ballasts good for solar panels?

With damaged concrete ballasts, your solar arrays risk further issues, so it's crucial to use concrete rated for your local environmental conditions. While concrete ballasts are ideal for flat or low-sloped roofs, they are also an effective solution for ground-mounted systems.

How do I get a quote for a solar panel ballast block?

For information or to request a quote: (800) 794-4727 or email@rcpblock.com
The RCP Solar Panel Ballast Block have a minimum 3,000psi compressive

strength; conform to ASTM C-90 specifications for load-bearing, medium weight masonry units; and ASTM C1884 specifications for concrete ballast blocks.

Why are FlexRack pre-cast solar panels different from ground-mount solar panels?

“Parapet height plays a role in that. You get turbulent winds, so the aerodynamics of the system are completely different from ground-mount, which is typically not a single row of modules.” Solar FlexRack’s Series B Pre-cast solar mounts were deployed on the 3.8-MW solar array on the landfill in Shrewsbury, Massachusetts.
