## Overview

---

Sodium-ion batteries (NIBs, SIBs, or Na-ion batteries) are several types of , which use (Na ) as their carriers. In some cases, its and are similar to those of (LIB) types, but it replaces with as the . Sodium belongs to the same in the as lithi.

Here, we explore some of the top companies leading the charge in sodium-ion battery technology. Contemporary Amperex Technology Co., Ltd. (CATL) CATL is a Chinese company that has made significant strides in sodium-ion battery technology. The company's first-generation sodium-ion battery boasts an energy density of 160Wh/kg, with the ability .

Here, we explore some of the top companies leading the charge in sodium-ion battery technology. Contemporary Amperex Technology Co., Ltd. (CATL) CATL is a Chinese company that has made significant strides in sodium-ion battery technology. The company's first-generation sodium-ion battery boasts an energy density of 160Wh/kg, with the ability .

Cost remains a key factor in the commercial viability of sodium-ion batteries. HiNa Battery estimates that by 2025, the energy density and cell costs of its sodium-ion batteries will partially overlap with those of lithium iron phosphate (LFP) batteries and achieve full parity by 2026, making them competitive in certain markets.

With sodium-ion batteries offering so much promise for the battery industry, there is naturally a slew of companies working on developing this technology. In this piece, we'll look at seven companies in the battery industry that, along with Accenture, are pushing the state of sodium-ion battery technology.

Sodium-ion batteries (NIBs, SIBs, or Na-ion batteries) are several types of rechargeable batteries, which use sodium ions (Na +) as their charge carriers. In some cases, its working principle and cell construction are similar to those of lithium-ion battery (LIB) types, but it replaces lithium with sodium as the intercalating ion .

Sodium ion batteries utilize sodium ions for charge transport between electrodes. Anode materials like carbon intercalate sodium ions during charging, while cathode materials release them during discharge. Electrolytes

facilitate ion movement for energy storage. Challenges persist for commercial viability. What is sodium ion battery technology?

One of the most compelling features of sodium-ion battery technology is its superior recyclability compared to lithium-ion batteries. Nadion Energy is dedicated to sodium-ion battery technology. We aim to inform about its sustainable and cost-effective solutions, revolutionizing energy storage.

Are sodium-ion batteries the future of energy storage?

As the demand for energy storage increases, sodium-ion batteries are poised to play a crucial role in the transition to a more sustainable future. Explore the top 6 Sodium-Ion Battery Companies in 2024 that are revolutionizing sustainable energy with innovative technologies.

Are sodium ion batteries a viable alternative to lithium-ion batteries?

The global shift towards clean energy and sustainable solutions has led to significant advancements in battery technology. Among these, sodium-ion batteries have emerged as a promising alternative to traditional lithium-ion batteries, offering higher energy efficiency, lower manufacturing costs, and a more environmentally friendly profile.

Who made the first sodium ion battery?

In February 2023, the Chinese HiNA Battery Technology Company, Ltd. placed a 140 Wh/kg sodium-ion battery in an electric test car for the first time, and energy storage manufacturer Pylontech obtained the first sodium-ion battery certificate [clarification needed] from TÜV Rheinland.

What are the advantages of sodium ion batteries?

Sodium-ion batteries have several advantages over competing battery technologies. Compared to lithium-ion batteries, sodium-ion batteries have somewhat lower cost, better safety characteristics (for the aqueous versions), and similar power delivery characteristics, but also a lower energy density (especially the aqueous versions).

How much energy does a sodium ion battery have?

The company recently unveiled three sodium-ion battery cell products with energy densities ranging from 140 Wh/kg to 155 Wh/kg. HiNa's sodium-ion batteries are geared towards mainstream market demand, offering

advantages such as a wide temperature range and high power.

## Exploring Sodium-Ion Batteries for Electric Vehicles

The search for advanced EV battery materials is leading the industry towards sodium-ion batteries. The market for rechargeable batteries is primarily driven by Electric Vehicles (EVs) and energy storage systems. In India, electric two-wheelers have outpaced four-wheelers, with sales exceeding 0.94 million vehicles in FY 2024.

### BYD launches sodium-ion grid-scale BESS product

In January, BYD began construction of 30GWh sodium-ion battery plant in Xuzhou City, China. BYD is the largest EV company in the world by sales, and has also expanded into lithium-ion battery cells and BESS production over the years, growing to be one of the largest in that space too. The US is also making a push into sodium-ion technology.
