Overview

How do I install an Aurora inverter?

Step 1: Remove the cover of the Aurora inverter (screw pos. "A" of Fig. 11) in order to gain access to the terminal block board. Step 2: Lay down the cables between the Aurora inverter and the outside passing through the provided holes and cable glands on the Inverter.

How does Aurora inverter work?

Normally, the AURORA inverter operates automatically and needs no particular supervision. When solar radiation is not enough to generate power for the grid (for instance, at night), AURORA disconnects automatically and goes into standby mode. The operating cycle is resumed automatically the moment solar radiation becomes strong enough.

What is inverter generating capacity?

Inverter Generating Capacity is equal to the sum of parallel-connected inverter maximum continuous output power at 40°C in watts, kilowatts, volt-amperes, or kilovolt-amperes . PV Module is a unit of environmentally protected solar cells and components designed to produce dc power.

Do I need a sine wave inverter for my solar energy system?

Almost always, a pure sine wave inverter is recommended for home solar energy systems. It's exciting to see your solar panels generate thousands of watt-hours on a sunny afternoon, so naturally, most people want a way to monitor their renewable energy system's performance. Today, most solar energy system monitoring is done by the inverter.

Are solar inverters safe?

Inverters are a key feature of a safely operating solar panel system, but correct installation by a professional is a key first step to ensuring a long, safe, and productive life for your system. The type of solar inverter you get installed

at your house will be determined by several different factors. This includes, but is not limited to:.

Is the Aurora inverter dangerous?

The Aurora inverter works at high voltage levels that may be extremely dangerous if all precautions are not observed. **WARNING: THE FOLLOWING OPERATIONS MUST ALWAYS BE PERFORMED** before accessing the power input of the inverter in order to avoid injury to personnel and/or damage to equipment.
