

## European Solar and Energy Storage Solutions

# Energy storage battery warehouse refrigeration system

## Overview

---

Should energy storage be integrated in refrigerated warehouses?

This work evaluated the potential benefits of integrating energy storage in the refrigerated warehouses. Two types of energy storage systems have been considered, including a cold energy storage system and an electrical energy storage system.

What types of energy storage systems can be used for refrigerated warehouses?

For refrigerated warehouses, two types of energy storage systems can be applied: the cold energy storage system and the electrical energy storage system, which store the cold energy in thermal reservoir by using high sensible heat materials or phase change materials and electricity in batteries, respectively.

Are cold and electrical energy storage systems feasible in a refrigerated warehouse?

Based on dynamic simulations, this work compared the techno-economic feasibility of integrating a cold energy storage system (Case 2) and an electrical energy storage system (Case 3) into a refrigerated warehouse. Results showed that the applications of cold and electrical energy storages in refrigerated warehouse were feasible.

Can cold energy storage and electrical energy storage systems be integrated?

This work evaluates the techno-economic feasibility of integrating the cold energy storage system and the electrical energy storage system in a refrigerated warehouse for shifting the power consumption. A dynamic model has been developed in TRNSYS®.

Are battery storage systems necessary for mining applications?

To prevent stochastic and intermittent nature of renewable energy systems,

energy storage units are required to be deployed on site . However, for mining applications battery storage systems tend to be very costly due to the large energy footprints associated with operational activities.

Does integrating a cold energy storage reduce electricity consumption and operational cost?

Results showed that, the integration of a cold energy storage can reduce the electricity consumption and operational cost by 4.3% and 20.5%, respectively. Even though integrating a battery system will increase the electricity consumption by 3.9%, it can reduce the operational cost by 18.7%.
