Energy storage device fire protection system enterprise

Overview

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation – Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.* Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.

What are the ESS safety requirements for energy storage systems?

The International Fire Code (IFC) published its most robust ESS safety requirements in the most recent 2021 edition. By far the most dominant battery type installed in an energy storage system is lithium-ion, which brings with it particular fire risks.

Can a battery energy storage system control electrical fires?

However, these systems may be used in the computer or control rooms of an ESS to control any electrical fires. Thermal runaway in lithium batteries results in an uncontrollable rise in temperature and propagation of extreme fire hazards within a battery energy storage system (BESS).

Are energy storage systems flammable?

These systems combine high energy materials with highly flammable electrolytes. Consequently, one of the main threats for this type of energy storage facility is fire, which can have a significant impact on the viability of the installation.

What is a battery energy storage system (BESS)?

Today, lithium-ion battery energy storage systems (BESS) have proven to be the most effective type, and as a result, demand for such systems has grown fast and continues to rapidly increase. Lithium-ion storage facilities contain high-energy batteries containing highly flammable electrolytes.
