

## European Solar and Energy Storage Solutions

# Energy storage system cost change chart

## Overview

---

What is the 2020 grid energy storage technologies cost and performance assessment?

Pacific Northwest National Laboratory's 2020 Grid Energy Storage Technologies Cost and Performance Assessment provides a range of cost estimates for technologies in 2020 and 2030 as well as a framework to help break down different cost categories of energy storage systems.

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Are energy storage systems cost estimates accurate?

The cost estimates provided in the report are not intended to be exact numbers but reflect a representative cost based on ranges provided by various sources for the examined technologies. The analysis was done for energy storage systems (ESSs) across various power levels and energy-to-power ratios.

What are the different types of energy storage costs?

The cost categories used in the report extend across all energy storage technologies to allow ease of data comparison. Direct costs correspond to equipment capital and installation, while indirect costs include EPC fee and project development, which include permitting, preliminary engineering design, and the owner's engineer and financing costs.

Why is it important to compare energy storage technologies?

As demand for energy storage continues to grow and evolve, it is critical to

compare the costs and performance of different energy storage technologies on an equitable basis.

What are energy storage cost metrics?

Cost metrics are approached from the viewpoint of the final downstream entity in the energy storage project, ultimately representing the final project cost. This framework helps eliminate current inconsistencies associated with specific cost categories (e.g., energy storage racks vs. energy storage modules).

## Energy storage system cost change chart

---

### 2022 Grid Energy Storage Technology Cost and ...

The 2022 Cost and Performance Assessment includes five additional features comprising of additional technologies & durations, changes to methodology such as battery replacement & inclusion of decommissioning costs, and updating ...

### 2020 Grid Energy Storage Technology Cost and Performance ...

developing a systematic method of categorizing energy storage costs, engaging industry to identify these various cost elements, and projecting 2030 costs based on each technology's ...

### Utility-Scale Battery Storage , Electricity , 2023 , ATB

Base year costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2022). The bottom-up BESS model accounts for ...

### Residential Battery Storage , Electricity , 2021 , ATB , NREL

Base Year: The Base Year cost estimate is taken from (Feldman et al., 2021) and is currently in 2019\$. Within the ATB Data spreadsheet, costs are separated into energy and power cost ...

## Projected Costs of Generating Electricity 2020 - ...

This report includes cost data on power generation from natural gas, coal, nuclear, and a broad range of renewable technologies. For the first time, information on the costs of storage technologies, the long-term operation ...

## Documenting a Decade of Cost Declines for PV Systems

The last decade has shown a sharp, though now steadying, decline in costs, driven largely by photovoltaic (PV) module efficiencies (now 19.5%, up from 19.2% in 2019) and hardware and inverter costs.
