

European Solar and Energy Storage Solutions

Eswatini novel energy solutions

Overview

Is Eswatini a sustainable country?

A nation that has long relied on neighboring South Africa and Mozambique for unsustainable fossil fuel-based electricity imports, renewable energy in Eswatini is quickly diversifying. The transformative journey culminated at the COP26 conference, where Eswatini committed to an ambitious 50% surge in renewable energy production by 2030.

What is Eswatini's energy revolution?

Eswatini's energy revolution is a testament to its dedication to sustainability and self-sufficiency. As Eswatini strides into the future with renewable energy, the convergence of local innovation, international collaboration and growth-oriented policies promises to illuminate every corner of the nation.

What is Eswatini's energy masterplan 2034?

In its Energy Masterplan 2034, the Kingdom of Eswatini identified renewable energy as the driving force behind the country's energy transformation, highlighting sustainable energy as a priority area for development in the Kingdom. In 2018, Eswatini, with support from the UN, developed the Programme Framework for Affordable Renewable Energy (PARES).

Why is Eswatini energy system important?

These resources could meet the entire national demand for electricity if fully exploited, whilst the excess energy could provide exporting opportunities to Eswatini's neighbours. The overall goal for the Eswatini energy system is therefore to reduce dependency on electricity imports.

What challenges does Eswatini face?

The key challenge facing the country's energy system is a lack of security of energy supply: Eswatini imports around 70 percent of its power, despite being well-endowed with conventional and renewable energy resources, including

coal, solar, hydro, wind and biomass residues from the sugar and forestry industries.

What is the main energy source in Eswatini?

Hydroelectric power currently stands as one of the most prominent energy sources in Eswatini. The EEC operates four hydropower plants, constituting 15% of the country's electricity production and plans to bolster the existing infrastructure.
