Overview

Why did the power grid fail in Cuba?

Cuba suffered from several power grid failures in October, which were initially caused by a lack of fuel at power plants that officials struggled to get back online because they were so outdated. The country's national power grid collapsed again when Hurricane Oscar hit in late October, killing at least seven people.

Why is there a power outage in Cuba?

Cuba's power grid has been plagued by frequent outages in recent months, with more than half of the country experiencing power cuts during peak hours. The outages are primarily caused by fuel shortages and aging infrastructure. In many parts of the island, electricity is crucial for cooking and water pumping.

When will Cuba's power be fully restored?

Cuba's Minister of Energy and Mines Vicente de la O Levy said on TV that the power will be fully restored by Thursday. A man cooks soup over an open fire on a sidewalk, during a blackout in Havana, Cuba, on December 4, 2024. Cuba has been hit with another nationwide blackout after the island's power grid failed.

What happened to Cuba's power plant?

The situation came to a head on Friday, when Cuba's largest power plant malfunctioned, joining several smaller plants already offline. Foul weather had also stalled the arrival of fuel from tanker ships offshore, starving the island's power plants. The combination prompted the entire grid to collapse.

Why does Cuba have a bad power system?

The country's superannuated power system is one part of the problem. The island relies on a handful of Soviet-era, oil-fired plants, most of which are half

a century old and break down frequently. None has received proper maintenance for almost two decades. The Cuban government blames American sanctions for choking off the import of spare parts.

Why is the Cuban electric power system losing its operations?

The so-called thermal generation is the basis of the Cuban Electric Power System, but it suffers from the handicap of an aging and overexploited infrastructure. In addition, it has been losing part of its operations, following the withdrawal of the Mariel, Renté, Nuevitas units and the historic Tallapiedra plant in Havana.
