# Exhaust distribution box in generator room

## Overview

---

Where should a diesel generator room be located?

1. Determination of diesel generator room: Considering the air intake, exhaust and smoke exhaust of the diesel generator set, the machine room is preferably located in the first floor if possible.

Where should exhaust air be sourced for a generator?

For generators with remote radiators, it is recommended that the exhaust air should be sourced as high as possible and directly above the generator sets. Significant bypass of ventilation airflow directly into the discharge airflow will lead to reduction in cooling effectiveness and elevated temperatures within the room.

How do you design a generator room?

The ventilation system and overall layout of a generator room should be examined in detail during the design process. While a generator set is specified by the electrical engineer, the onus is on the mechanical engineer for an optimum design that maximizes the performance, longevity, and reliability of the genset.

What is the layout of equipment in a generator room?

Layout of equipment in the machine room: The equipment layout shall be based on the unit capacity and number of units, and shall be compact, economical and reasonable, safe and easy to maintain. When there is only one unit in the generator room, if the unit capacity is 500kW or less, there is generally no control room.

Why should a generator room be ventilated?

Generator room ventilation 101 Proper ventilation of the generator room is necessary to support the engine combustion process, reject the parasitic heat generated during operation (engine heat, alternator heat, etc.), and purge

odors and fumes.

What factors affect the ventilation of a generator?

Room size and layout: The room configurations effectively decide the ventilation strategies to ensure even airflow. Generator type and fuel: The type of generator and its fuel, like natural gas, diesel, or others, produce different types of exhaust composition. It impacts the ventilation requirements.
