Explore new energy storage methods

Overview

Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.

Mechanical energy storage harnesses motion or gravity to store electricity.

These 3 energy storage technologies can help solve the challenge of moving to 100% renewable electricity. Longer charges From alkaline batteries for small electronics to lithium-ion batteries for cars and laptops, most people already use batteries in many aspects of their daily lives. But there is still lots of room for growth. Safer batteries Another priority is to make batteries safer. Storing sunlight as heat . Advanced renewable fuels .
