Free installation of solar power in the villa

Overview

Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there's no one-size-fits-all solar solution, here are some resources that can help you figure out what's best for you. Consider these questions before you go solar. See the Spanish version here.

How do I choose a solar installer?

Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar. Comparison-shop by asking multiple installers to come assess your roof.

Should you go solar if your home is not suitable for solar?

If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program. By going solar, you can play an active role in achieving the nation's goal of a carbon-free electricity sector by 2035. For more information, visit the Homeowner's Guide to Going Solar.

What if my home is not suitable for rooftop solar?

The National Renewable Energy Laboratory's SolarTRACE tool can give you a general idea of how long it may take to complete the permitting, inspection, and interconnection process in your jurisdiction. If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program.

Should I buy or install a solar system?

Purchasing and installing a system that you fully own and maintain is no longer the only option if you want to go solar. Even if you rent your home or

don't want to purchase a rooftop system, there are many programs will enable you to still benefit from solar electricity.

How to install solar panels on your roof?

This part involves physically attaching the racking or mounting system to your roof in order to support the solar panels. The mounting system is usually tilted between 18 to 36 degrees upward, depending on what your local sunlight exposure is like. It can't be understated how important it is to make the mounting system sturdy.
