Game Studio Solar Power Generation

Overview

Are solar-powered game consoles a waste of resources?

Next to initiatives like the above, solar-powered game consoles might seem, at best, an indulgence, at worst, an outright waste of expertise and resources. But as Hester notes, the insight required to get something as demanding as a videogame running on small-scale renewable power can be reapplied.

What games can you play on a solar power DS?

Reminiscent of Nintendo's much later DS consoles, but with a strip of photovoltaic cells in place of the top screen, the LCD Solarpower range offered simple, built-in games like spook 'em up Terror House or prison caper Breakout, rendered with jaunty, "painted-on" 2D graphics.

What is a solar-powered console?

Solar-powered consoles are one piece of a puzzle that extends beyond questions of technological capability to lifestyle expectations and cultural factors that might be investigated, and challenged, through artworks such as games. "The work is not completely technical," Hester sums up. "It has a human component."

How much carbon dioxide does the gaming industry produce?

Abraham broadly estimates the gaming industry produced between 3 million and 15 million tons of carbon dioxide in 2020 to create video games. That includes energy bought from local grids and used to keep the lights on and computers powered as developers make games.

How can a game studio make a big change?

The easiest change studios, either big or small, can make is by switching their electricity supply to 100 percent renewable or carbon-offset power. From there, Abraham suggests selling games digitally (which already accounts for 90 percent of new game releases), eliminating the hard-to-track emissions of

manufacturing and goods transport.

Why do game developers have so much power?

This is the power that game developers have, Escudra said: to create new worlds with major existential threats and put players in positions where they can build the tools to tackle them — and then try again if they fail. "That safety is so important, and it's safety that we don't have in the real world," Escudra said.
