**FLEXIBLE SETTING OF  
MULTIPLE WORKING MODES**

## Overview

---

A wind turbine turns wind energy into electricity using the aerodynamic force from the rotor blades, which work like an airplane wing or helicopter rotor blade.

A wind turbine turns wind energy into electricity using the aerodynamic force from the rotor blades, which work like an airplane wing or helicopter rotor blade.

The science behind how wind turbines generate electricity is based on the principle of the turbine converting the kinetic energy of the wind into mechanical energy, and then into electrical energy.
