Generator wind whistling sound

Overview

What is wind noise?

Note: By wind noise, we refer to the wind turbulent pressure fluctuations that generate low-frequency rumbling sound in microphone signals, and not particularly to the aeroacoustic sound generated by wind (e.g., whistling in pipes or electric cables, rustling leaves, etc.).

How do I generate synthetic wind noise?

To generate synthetic wind noise, follow these steps: The repo contains a basic example `generate_example.py` that generates wind noise with a specific wind speed profile, saves to a .wav file, and plot the result. The `WindNoiseGenerator` class provides various customization options to tailor the wind noise generation to your specific needs.
