Greek Microgrid

Overview

Does Tilos have a microgrid?

A microgrid controls the power supply to around 100 households on the island. The Tilos municipality receives a 3 percent share of revenues from the power station—operated by Eunice Energy Group, a private Greek company—which sells its electricity production to state energy company PPC.

Should microgrids be considered a 'macrogrid'?

In industrialized countries, microgrids must be discussed in the context of a mature “macrogrid” that features gigawatt-scale generating units, thousands or even hundreds of thousands of miles of high voltage transmission lines, minimal energy storage, and carbon-based fossil fuels as a primary energy source.

Will grid-tied microgrid customers stay connected if the grid fails?

Although grid-tied microgrid customers will likely stay connected to the grid for the foreseeable future, only islanding in the case of utility grid failure, self-consumption of microgrid generated energy could erode the revenue base that has traditionally paid for utility infrastructure investments.

Is a microgrid considered an Electric Corporation?

A microgrid is likely to be considered an electric corporation if it intends to serve multiple, otherwise unrelated, retail customers, cross a public way with power lines, and/or obtain a franchise from a local authority. The reasons for this conclusion are discussed below in more detail.

What is a grid-tied DC-based microgrid?

Lastly, a grid-tied DC-based, non-synchronous architecture simplifies interconnection with the AC grid and permits straightforward plug-and-play capabilities in the microgrid, allowing addition of components without substantial re-engineering .

What is a microgrid & how can it help a community?

While the balance of driving factors and the details of the particular solution may differ from place to place, microgrids have emerged as a flexible architecture for deploying distributed energy resources (DERs) that can meet the wide ranging needs of different communities from metropolitan New York to rural India.

Microgrid Modeling and Analysis using Game Theory Methods (in Greek)

The microgrid encompasses a portion of an electric power distribution system that is located downstream of the distribution substation, and it includes a variety of DER units and ...

Greek Utility, PPC, Launches 550MW Solar Plant Tender

Published on August 13, 2022 by Microgrid Media Staff The Utility in Greece, PPC Renewables, S.A, will build a 550MW solar photovoltaic plant, Greece's largest photovoltaic facility to come. ...

A remote Greek island is on its way to becoming ...

Enter the EU-funded TILOS project, which has set out to make Tilos the first in the Mediterranean to be powered exclusively by renewable energy. This tiny island in the Aegean Sea has a local population of about 500 ...
