## Overview

---

Once built, these turbines create no climate-warming greenhouse gas emissions, making this a “carbon-free” energy source that can provide electricity without making climate change worse.

Once built, these turbines create no climate-warming greenhouse gas emissions, making this a “carbon-free” energy source that can provide electricity without making climate change worse.

Wind turbines do not release emissions that can pollute the air or water (with rare exceptions), and they do not require water for cooling.
