# Hijau energy Sweden

## Overview

---

Energy in Sweden is characterized by relatively high per capita production and consumption, and a reliance on imports for fossil fuel supplies. With 98% of electricity generation coming from renewables and nuclear in 2023, is nearing zero emissions. Sweden is also a major net exporter of electricity, exporting over 20% of national electricity generation to the rest o.

What type of energy is used in Sweden?

Historical energy consumption in Sweden by source. Renewables and nuclear is given as the electricity produced. Energy in Sweden is characterized by relatively high per capita production and consumption, and a reliance on imports for fossil fuel supplies.

What are the key elements of Sweden's energy transition?

The electricity system is another important element in Sweden's energy transition. Sweden has largely decarbonised its electricity generation through investments in nuclear power, hydropower, and most recently, other renewables. This is an important achievement that needs to be sustained.

Does Sweden have a good energy policy?

Sweden's energy policy is also well-integrated with its climate objectives, according to the latest review of the country's energy policies conducted by the International Energy Agency. In the 2016 Energy Agreement and the Climate Framework from 2017, Sweden set ambitious targets, including the long-term goal of zero net emissions by 2045.

Where is the largest hydroelectric power station in Sweden?

The largest station, the Harsprånget hydroelectric power station, is located on the upper Lule River and has a maximum production capacity of 977 MW. The Lule River is also the most productive river, with almost 18% of the Swedish installed capacity. Almost all of the medium to large plants are located in northern Sweden.
