# Household solar power generation equipment quotation

## Overview

---

How many solar panels are enough to power a house?

One solar panel is not enough to power a house. Home solar systems typically feature 10-20 panels to produce enough power to offset 100% of the average household electricity consumption.

How do I get the best value on solar panels?

Here are some tips to get the best value on solar panels for your home. Get multiple quotes. Receive and compare several quotes for solar to compare the total cost, quality of products and warranty terms. If you find a company you like but their price is higher than another, ask if they will price match.

How do I get a great deal on solar panels?

The best way to get a great deal on your solar panel system is to compare quotes based on cost, equipment, and installer reputation. Historically, many solar shoppers only received one solar quote from a door-to-door salesperson or a cold call. But how can you feel confident in your solar decision if you only see one quote?

.

Why should you use solar energy to power your home?

Generating energy from the sun is free—using it to power your home can help protect you from rising energy costs. Generate, use, store and charge—all with one fully integrated clean energy ecosystem by Tesla. All of our products work together seamlessly, optimizing your energy usage and savings while minimizing your impact on the environment.

How much does solar panel maintenance cost?

Solar panel maintenance costs: Solar panels have no moving parts, so very little maintenance is required. However, getting routine professional solar

panel cleaning and inspections every two years can keep your system in tip-top shape. These solar maintenance costs can be about \$300 per session.

How much does a 5000 watt solar system cost?

A fully installed solar system typically costs \$3 to \$5 per watt before incentives like the 30% tax credit are applied. Using this measurement, 5,000 Watt solar system (5 kW) would have a gross cost between \$15,00 and \$25,000. The price per watt for larger and relatively straightforward projects are often within the \$3-\$4 range.
