This is the easiest way to ensure a simple, highly reliable communication connection is made within an SMA system solution. An Ethernet cable link between devices (either directly, through a daisy chain or star configuration, or via a modem-router), allows data to be transmitted between devices in the system.

If you have a household solar system, your inverter probably performs several functions. In addition to converting your solar energy into AC power, it can monitor the system and provide a portal for communication with computer networks.

4. **Communication.** Communication interfaces on the inverter allow control and monitoring of all parameters, operational data, and yields. Data can be retrieved and parameters can be set for the inverter via a network connection, industrial fieldbus such as RS485, or wireless via SMA Bluetooth®.
