**How many years does it take  
for home solar power  
generation to pay back**

## Overview

---

A typical payback period for residential solar is 7-10 years, although it varies depending on your utility rates, incentives, system size, and other factors.

A typical payback period for residential solar is 7-10 years, although it varies depending on your utility rates, incentives, system size, and other factors.

This time frame, known as the solar panel payback period, averages between six and 10 years for most residential solar installations.

A good solar payback period is between five and eight years. Low system costs, high power bills and solar incentives can lower your payback period.

In most American households, solar panels pay for themselves within 9 to 12 years after their installation, however, in some locations, it may take as little as five years. How long does it take for solar panels to pay back?

The amount of time it takes for the energy savings to exceed the cost of installing solar panels is known as the payback period or break-even period. A typical payback period for residential solar is 7-10 years, although it varies depending on your utility rates, incentives, system size, and other factors.

How long is a solar panel payback period?

This time frame, known as the solar panel payback period, averages between six and 10 years for most residential solar installations. Payback periods vary based on several factors, such as your selected financing option and available solar incentives.

How long will a solar system pay for itself?

A common question when deciding whether to go solar is how long until the system pays for itself. According to Energy Sage, the average payback period or break-even point is 8.7 years, but your specific time line depends on several factors. Read on to learn about the factors impacting your solar panel payback period and how you can calculate it.

How do solar panels pay back?

If you'd rather skip the long explanations and math equations, you can calculate the payback period for your specific home now by using our solar panel payback calculator: Solar panels pay for themselves over time by saving you money on electricity bills, and in some cases, earning you money through ongoing incentive payments.

How long do solar panels last on EnergySage?

That's the average payback period on EnergySage. At the end of those 7.5 years, your solar panels will have saved you enough money on your electric bill to cover the upfront cost of your system. Year eight in the example is when you technically start saving money, having finally broken even on your investment.
