

# **How to adjust the photovoltaic panel right angle adjuster**

## Overview

---

A solar panel tilt kit is a kit you can use to make your solar panels capable of tilting so that they can increase their efficiency. A motorized version of this kit puts the tilting system on a motor so that you can operate it remotely. A remote operating system means that you don't need to tilt it by hand, so one doesn't need to.

While it can depend on your situation, in general, tilting your solar panels maximizes their value and efficiency, increasing their output.

You can install a motorized solar panel tilt kit for arrays attached to RVs and even vans. A motorized system has even more utility on a vehicle than on a home, as moving vehicles must.

While each different kit can have other parts, they tend to have similar features and required components, which may help you understand the installation process and how the panels are.

Yes, you can install a motorized solar panel tilt kit yourself if you'd like. Doing this does require some electrical and solar panel knowledge, but in.
