The optimum tilt angle is calculated by adding 15 degrees to your latitude during winter, and subtracting 15 degrees from your latitude during summer.

The optimum tilt angle is calculated by adding 15 degrees to your latitude during winter, and subtracting 15 degrees from your latitude during summer.

An ideal angle for your solar panels will be equal or close to the latitude of where you are installing your solar panels. Therefore, a typical angle is between 30° and 45°.

According to the DOE, south-facing solar panels perform best when they're tilted between 15 and 40 degrees.
