hello friends, Today i will show you 4 amazing non battery operated diy solar toy. Here two car and two boat. I have shown these processes with very easy and simple steps. I used some home.

Small Solar Panel: Construct a small, portable solar panel that will charge two AA rechargeable batteries in a day or two. Use the batteries to make any battery-powered device solar powered.

Many full-scale solar panel arrays use low-loss Schottky diodes and a fuse between the batteries and each solar panel. Let's try a simple experiment with the solar panel by testing the output DC voltage and output current from the panel.

1. Solar Oven. Cut a flap in the top of the pizza box leaving a 2" border on the sides and front. Wrap the bottom side of the flap and the interior of the pizza box with aluminum foil "shiny side out" and tape in place. Cover the opening created by the flap with plastic wrap and tape into place.
