How to bond photovoltaic panels to wires

Overview

There are two types of inverters used in PV systems: microinverters and string inverters. Both feature MC4 connectors to improve compatibility. In this section, we will explain each of them and their details.

Planning the solar array configuration will help you ensure the right voltage/current output for your PV system. In this section, we explain what these items are and their importance.

Now, it is important to learn some tips to wire solar panels like a professional, below we provide a list of important considerations.

Up to this point, you learned about the key concepts and planning aspects to consider before wiring solar panels. Now, in this section, we provide you with a step-by-step guide on how to wire.

Connect or “bond” all ground rods together via bare copper wire (#6 or larger, see the NEC) and bury the wire. Use only approved clamps to connect wire to rods.

Learning how to wire solar panels requires learning key concepts, choosing the right inverter, planning the configuration for the system, learning how to do the wiring, and more. In this article we will teach you all of these, saving you weeks if not months of hard studying on the subject.

Even if you don’t do any harm, a smart solar panel wiring plan will optimize performance and maximize the return on your investment. Read on to find out more about solar panel connection diagrams and how to wire PV modules to achieve the best performance based on your unique installation requirements.

Using approved mechanical connectors and bonding washers are two popular bonding and grounding methods. Mechanical connectors can be mounted to a module or racking frame with lay-in features which accept a copper wire that

bonds and grounds components, said Zwit.

Lugs and wire can still be used for bonding PV modules, but the lugs are now required to be listed for the application, per 690.43(A). In recent years, products have been developed to comply with the requirements of 690.43 by using the very frames upon which the PV modules are mounted to bond the modules.
