We'll discuss the factors to consider when choosing the right renewable energy sources, including your location, energy needs, and budget.How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

How do I choose a solar panel?

When selecting a solar panel, consider your available space, the surface you'll be mounting it on, and whether you want a portable or permanent installation. Then move on to determining how many panels and what rated power and efficiency they need to meet your electricity consumption needs.

How to choose a solar panel for a portable power station?

Solar panels with a higher rated power have the capacity to produce more electricity. If you want to generate more energy using less space, then a panel with higher rated power output is the better choice. Remember to check the solar input/charge capacity of your portable power station or other balance of system carefully.

What are the different types of solar energy?

There are two main types of solar energy: photovoltaic and thermal. The "photovoltaic effect" is the mechanism by which solar panels harness the sun's energy to generate electricity. Want to take advantage of solar energy yourself?
