This paper proposed a capacity allocation method for the photovoltaic and energy storage hybrid system. It analyzed how to rationally configure the capacity of the photovoltaic system and how to couple its capacity with the capacity configuration of the energy storage system.

The configuration of photovoltaic & energy storage capacity and the charging and discharging strategy of energy storage can affect the economic benefits of users. This paper considers the annual comprehensive cost of the user to install the photovoltaic energy storage system and the user's daily electricity bill to establish a bi-level .

When PV and battery storage are co-located, they can be connected by either a DC-coupled or an AC-coupled configuration. DC, or direct current, is what batteries use to store energy and how PV panels generate electricity. AC, or alternating current, is what the grid and appliances use.

Clean Energy Group produced Understanding Solar+Storage to provide information and guidance to address some of the most commonly asked questions about pairing solar photo- voltaic systems with battery storage technologies (solar+storage).
