The good news is that it's entirely possible to add battery storage to an existing solar panel setup. So-called "storage ready" systems are already equipped with an inverter that can easily direct excess power into a battery. But even if your system wasn't designed with storage in mind, you still have options.

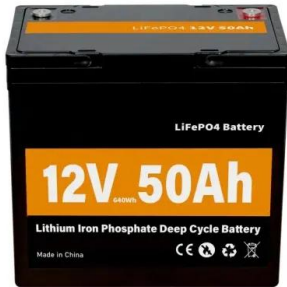

Connecting solar panels to batteries allows for energy storage, which can reduce energy costs and carbon footprints. This setup provides backup power during outages and enables the use of solar energy when the sun isn't shining, enhancing overall energy independence.

Many solar-energy system owners are looking at ways to connect their system to a battery so they can use that energy at night or in the event of a power outage. Simply put, a solar-plus-storage system is a battery system that is charged by a connected solar system, such as a photovoltaic (PV) one.
