# How to connect the energy storage cabinet thermostat

## Overview

---

If your system includes a PLC Connect you can also use the Steffes online web app to schedule temperature setbacks for different days and times, further reducing heating costs. This same app allows you to turn the temperature down remotely if you are away from home. Our Energy Management Advisors are available to.

To install a smart thermostat, you'll need electrical tape, hand-held drill, pliers, screwdriver, and extra twist-on connectors. Use a multimeter to check for wiring continuity. Use foil tape to reseal the face of the air handler—which was manufactured by Ecobee .

The PowerShift Smart Thermostat requires a 24 Volt AC (24 VAC) Common Wire (C/X Wire) to supply power. If your existing thermostat is not powered by 24 VAC, you may have to connect the Common Wire at the HVAC unit. Follow the instructions below to determine if your home has the required 24 VAC Common Wire.

Page 1 GETTING STARTED The PowerShift Smart Thermostat requires a 24 Volt AC (24 VAC) Common Wire (C/X Wire) to supply power. If your existing thermostat is not powered by 24 VAC, you may have to connect the Common Wire at the HVAC unit. Follow the instructions below to determine if your home has the required 24 VAC Common Wire.

Operating and Storage Environment, Electrical and Dimensions • Operating Temperature is 32°F to 104°F (0 to 40°C) • Shipping and storage temperature range is -4°F to 140°F (-20°C to 60°C) • Operating humidity range is 10% to 90% non-condensing at 104°F (40°C) • Storage humidity range is 5% to 95% non-condensing at 104°F (40°C)

## How to connect the energy storage cabinet thermostat
