What does a complete PACK line look like?

The lithium battery pack production line refers to a systematic collection of equipment and process flows required for producing lithium battery packs. Typically, it includes six core stages: cell manufacturing, cell testing, cell grading, cell assembly, packaging, and quality inspection. Among these .

The goal is to analyze the methods for defining the battery pack's layout and structure using tools for modeling, simulations, life cycle analysis, optimization, and machine learning. The target concerns electric and hybrid vehicles and energy storage systems in general.

The packaging and assembly of lithium-ion battery packs are crucial in the field of energy storage and have a significant impact on applications like electric vehicles and electronics. The pack line process consists of three main phases: production, assembly, and packaging.
