To wire a solar panel to an LED light, you will need the following nine items: 1. A solar panel 2. LED light 3. An LED controller 4. Wires 5. Connectors 6. Wire Stripper 7. Crimping tool 8. Screwdriver 9. Soldering iron An LED typically requires only a little power, so if you use the solar panel only for the LED light, it doesn't.

The simple setup above is going to be limited. To better control the LED's operation, you can wire the LED light to an LED controller and then.

You may need to test the current for brightness or another power issue with the LED light. I will show you how this is done using a low-powered LED in electronic circuits. Specifically, I.

To wire the solar panel to an LED light in a simple way:  
Strip the wire ends (about half an inch).  
Connect the wires using the crimping tool  
Attach each contact to a connector for each wire, as indicated in the wiring diagram.  
Using these connectors, connect the solar panel to the charge controller.  
Bind with the charging regulator using a screwdriver.  
Connect the LED controller to the LED.
