How to connect the photovoltaic panel to the heater circuit

Overview

Connecting a solar panel directly to a heater allows the electrical energy harvested from sunlight to be directly converted to heat. This differs from traditional solar panel systems which convert sunlight into electricity stored in batteries for powering appliances and devices.

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

I am planing to buy a 250/500 watt solar PV panel and connect it directly to my 2kw immersion heater attached to hot water cylinder without any convertor/inverter in between. (pure DC to heating element). I believe this should work in principal and should raise temperature of water by 10-15 degrees in one day.

I am trying to connect a photovoltaic panel directly to a heating element (coil) without using a battery or an inverter and switch it on or off by using a transistor or a thyristor. I am well awar.

Solar panel diagrams are graphic representations of the connections you should make between each PV module and other components of the solar power system, including: Solar inverter; Charge controller; Solar battery; Battery Management System; Storage inverter; Smart Home Panel ; Transfer switch
