There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. The most common is a "LOAD SIDE" connection, made AFTER the main breaker. The alternative is a "LINE OR SUPPLY-SIDE" connection made BEFORE the main breaker.

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

Solar panel connections: How are solar panel connectors used?

Learning how to use solar panel connectors is extremely important if you own a PV system. In this section, we teach you how to attach a solar connector to a wire, lock or unlock it, and install it in series, parallel, and series-parallel.
